*48V to 12V Reducer for electric cars is **REQUIRED** for electric cars to maintain their battery warranty. Using one 12V battery or (2) 8V batteries reduced to 12V WILL cause the battery(ies) to die prematurely due to the high amperage draw of the stereos. This reducer is \$150 plus \$30 for installation.

The stereo packages as listed above do not transfer directly onto the Yamaha DRIVE platform. As long as the DRIVE is equipped with a factory lighting package, it will NOT require the addition of a voltage reducer. Additionally, the overhead console supplied by Yamaha is made to contour fit the standard DRIVE top (not an extended top). This console comes with (2) speakers pre-installed, but NOT the stereo head unit. Therefore it is NOT necessary to purchase speakers separately.

Stereo Receiver Head Unit (Select from Packages Above)	130 - 350	60	190 - 410
Yamaha Overhead Console - Black	250	Incl.	250
